

Personal Introduction

AI/ML • Software Engineering • Research • Building

I am Shomay Singh Parihar, a BCA student at Amity University, Noida, with a strong interest in Artificial Intelligence, Machine Learning, software engineering, and research. I enjoy understanding how systems work at a fundamental level and then turning that knowledge into practical projects.

About Me

I am highly curious about technology and particularly interested in AI/ML. My long-term goal is to become a world-class software and AI engineer while continuing to develop strong research capabilities. I prefer learning by building, experimenting, debugging, and going deeper into the underlying concepts.

Technical Interests & Skills

Programming: Python, Java, JavaScript, HTML, CSS, PHP

Machine Learning: scikit-learn, NumPy, Pandas, Matplotlib, model evaluation, feature engineering, ensemble methods, optimization and ML pipelines

AI: Deep Learning, LLMs, RAG systems, embeddings, vector databases and AI agents

Software: Node.js, Express, PostgreSQL, Docker, Git/GitHub and API integration

Automation: n8n, workflow automation, social-media automation and AI-powered systems

Projects & Building

I have worked on practical software and AI projects including ReplyNest, an Instagram automation SaaS concept, AI/RAG-based applications, automation workflows, and university-focused AI systems such as UniAssist. I am also interested in building larger AI-native systems and developer tools.

Research Direction

I want to explore AI/ML research broadly, with particular interest in understanding models, retrieval systems, intelligent agents, machine learning architectures, and the engineering required to turn research ideas into reliable systems. I value the research process itself: asking questions, testing hypotheses, analyzing results, and iterating.

Learning Philosophy

I believe strong fundamentals matter. I actively study mathematics, statistics, probability, algorithms and data structures alongside practical ML and software engineering. My preferred approach is to combine theoretical understanding with implementation rather than treating AI as a collection of ready-made libraries.

Long-Term Vision

My long-term ambition is to build technically ambitious AI products and systems while developing into a strong AI/ML researcher and software engineer. I want to work on problems that require both engineering discipline and deep technical thinking.

Personal principle

Learn deeply. Build relentlessly. Question everything. Turn ideas into working systems.
